

Tropical Storm Alpha Media Release

Exercise Simulation – 26 February, 1500HRS Storm Situation Update

St. George's, Grenada – 26 February

At approximately 3:00 PM today, authorities received updated information regarding the simulated storm system currently affecting the region.

The Meteorological Office has provided five (5) updated satellite and radar images indicating continued storm activity within the monitoring area. Additionally, two (2) voice notes were received from field personnel reporting on current weather conditions and localized impacts.

A brief field update confirms increased rainfall, gusty winds, and minor surface water accumulation in select areas. At this time, no major structural damage or injuries have been reported within the simulation parameters.

Emergency coordination teams are actively reviewing all incoming information to assess potential risks and determine appropriate response measures. Agencies remain in communication to ensure timely information sharing and operational readiness.

The public is reminded that this is a simulation exercise designed to test communication and response protocols.

Further updates will be provided as the exercise progresses.
